

- **Explosives (Class 1)**
 - Substances which are capable of producing gas at such a temperature/pressure or speed as to cause damage to the surroundings
- **Gases (Class 2)**
 - Gases whether compressed, liquefied, dissolved under pressure or refrigerated
- **Flammable Liquids (Class 3)**
 - Liquids which readily give off flammable vapours
- **Flammable Solids (Class 4.1)**
 - Solids easily ignited by sparks or flames
- **Spontaneously Combustible (Class 4.2)**
 - Substances that combust when they come into contact with air
- **Dangerous when wet (Class 4.3)**
 - Any substance which when wet give off flammable gases; i.e. Calcium
- **Oxidising Agents (Class 5.1)**
 - A substance that burns upon contact with another material
- **Organic Peroxides (Class 5.2)**
 - Substances containing both fuel & oxygen
- **Toxic Substances (Class 6.1)**
 - Substances which, if ingested inhaled or absorbed are likely to cause death or serious injury
- **Infectious Substances (Class 6.2)**
 - Diseases, medical specimens or clinical waste
- **Radioactives (Class 7)**
 - Substances which emit radiation harmful to the body
- **Corrosives (Class 8)**
 - Substances which, by chemical action attack & destroy materials i.e. Acids & Alkaline
- **Miscellaneous (Class 9)**
 - Substances which present a danger to people or the environment not found in the other classes i.e. Asbestos

Load thresholds differ between different substances
